

PRIOR AUTHORIZATION REQUEST

CLINICAL JUSTIFICATION:

70-year-old female with chronic right knee pain 2 years. Completed physical therapy. MRI shows degenerative horizontal tear medial meniscus, moderate OA KL Grade 3. No mechanical locking. Stiffness and difficulty with stairs. BMI 32.

CLINICAL DOCUMENTATION

OFFICE VISIT - 2026-06-08

Patient: Margaret Wilson | DOB: 1955-12-08

Provider: Orthopedic Group Practice

History: Chronic knee pain, 2 years. Did PT (duration not documented). MRI: degenerative meniscal tear + OA.

Exam: No locking, no catching, no instability. Stiffness only.

Assessment: Degenerative joint disease with incidental meniscal tear. No mechanical symptoms.

Plan: Arthroscopy requested but clinical picture suggests primarily arthritic rather than mechanical etiology.
