

PRIOR AUTHORIZATION REQUEST

CLINICAL JUSTIFICATION:

38-year-old female with mechanical low back pain for 3 weeks after lifting heavy box. No radiation to legs. No numbness or tingling. No weakness. Normal neurological exam. No physical therapy tried yet. Requesting MRI to rule out disc herniation due to patient anxiety about pain.

CLINICAL DOCUMENTATION

OFFICE VISIT - 2026-06-10

Patient: Sarah Martinez | DOB: 1985-03-22

Provider: Family Medicine Clinic

SUBJECTIVE: Acute onset back pain 3 weeks ago after lifting. No leg symptoms. No numbness. Very anxious about possibility of disc herniation.

OBJECTIVE: Normal gait. No neurological deficits. Normal reflexes bilateral. No tenderness to palpation.

ASSESSMENT: Acute mechanical low back pain. No red flags.

PLAN: Patient requesting MRI. No conservative therapy attempted yet. Submitting PA request per patient demand.
